

## Engr 540: Environmental Organic Transport Phenomen CHEMICAL ENGINEERING

Using chemical equilibria and transport to predict the fate of chemicals in the natural environment. Course goal: a comprehension of the underlying engineering science principles; thereby, fostering greater problem solving creativity. The course shows that the same principles that govern transport are used in the design of environmental treatment processes. 3 Credits

## **Prerequisites**

• Engr 321: Thermodynamics

## Instruction Type(s)

• Lecture: Lecture for Engr 540

## **Subject Areas**

- Chemical Engineering
- Engineering, General
- Civil Engineering, General
- Environmental/Environmental Health Engineering

about the accreditation.
