

Anth 412: Ceramic Analysis

SOCIOLOGY & ANTHROPOLOGY

This course is designed to teach methods and techniques for the analysis of ceramic materials from prehistoric sites by combining theory and analytical procedures with hands-on experience in the laboratory. Both traditional typological concerns as well as more modern analytic methods will be used to ultimately identify issues of production, exchange, function, design, social interaction, and technological and stylistic evolution. Students will also examine quantitative methods for the manipulation and interpretation of ceramic data.

3 Credits

Prerequisites

- Pre-Requisite: 24 Earned Hours

Instruction Type(s)

- Lecture: Lecture for Anth 412

Subject Areas

- [Anthropology](#)
