

Engs 626: Community Growth

SCHOOL OF ENGINEERING

This course focuses on the use of remote sensing and GIS technologies to facilitate urban planning and infrastructure development for community growth. It introduces to students various aspects of urban growth, such as the effect of urbanization on local and regional environments, and the impact of urbanization on the biophysical characteristics that influence human health. Other important issues, such as urban growth and economic development, public health and safety, traffic and transportation infrastructure, and quality of the life are also explored.
