

Engr 540: Environmental Organic Transport Phenomen

CHEMICAL ENGINEERING

Using chemical equilibria and transport to predict the fate of chemicals in the natural environment. Course goal: a comprehension of the underlying engineering science principles; thereby, fostering greater problem solving creativity. The course shows that the same principles that govern transport are used in the design of environmental treatment processes.

3 Credits

Prerequisites

- [Chem 105: General Chemistry I](#) (Minimum grade: C-)
- Prerequisite: Junior standing (60 hr).

Instruction Type(s)

- Lecture: Lecture for Engr 540

Subject Areas

- [Chemical Engineering](#)
- [Engineering, General](#)
- [Civil Engineering, General](#)
- [Environmental/Environmental Health Engineering](#)
