

Manf 465: Applications in Ops & Supply Chain Mgmt

School of Engineering

This course provides an understanding of scope of operations management and value chains. Topics include structural (e.g., capacity, facility, technical, and logistical & supply chain), and infrastructural (e.g., workforce, production planning, materials control, performance measures, and organization renewal and improvement) issues in operations of an organization. Students will utilize basic statistics to formulate operations and supply chain fundamentals.

3 Credits

Prerequisites

- Junior Standing Required

Instruction Type(s)

- Lecture: Lecture for Manf 465

Subject Areas

- [Manufacturing Engineering](#)
