THE UNIVERSITY of MISSISSIPPI

Csci 543: Data Mining
Computer & Information Science

This course focuses on techniques for analyzing large datasets to identify patterns of information and organize them for use in decision making. The topics include exploratory data analysis, classification, clustering, text mining, web mining, recommender systems, and neural networks as well as advanced topics covering the applications of data mining in cross-cutting domains.

3 Credits

Prerequisites

- Pre-Requisite: CSCI 211 and CSCI 223 or Graduate standing in Computer Science.

Instruction Type(s)

- Lecture: Lecture for Csci 543

Subject Areas

- Computer Science
