

## Phys 607: Atomic and Nuclear Physics Physics & Astronomy

This course is devoted to the main experimental and theoretical results in atomic and subatomic physics. These include atomic configurations and spectroscopy; properties of atoms in magnetic and electric fields including fine and hyperfine structure in atomic spectra; X-ray spectroscopy; main concepts of nuclear physics for understanding influence of the nucleus on atomic spectra.

## **Instruction Type(s)**

• Lecture: Lecture for Phys 607

## **Subject Areas**

- Nuclear Physics
- Atomic/Molecular Physics

## **Related Areas**

- Acoustics
- Condensed Matter and Materials Physics
- Elementary Particle Physics
- Optics/Optical Sciences
- Physics, General
- Physics, Other
- Theoretical and Mathematical Physics
