Csci 521: Computer Systems Engineering

Computer & Information Science

Analysis of computer system components and manufacturing economics, and how they influence design goals, direct architectural development, create hardware/software issues and modify implementation concepts, as well as system and circuit packaging.

3 Credits

Prerequisites

- Pre-requisite: CSCI 423 or CSCI 501 or Graduate Standing

Instruction Type(s)

- Lecture: Lecture for Csci 521

Subject Areas

- Computer Science
