Engr 545: Polymer Nanocomposites

Chemical Engineering

This course is designed as an introductory graduate-level course covering topics related to the design, synthesis, fabrication, testing, and characterization of polymer nanocomposites (PNCs). Different applications of PNCs are also discussed.

3 Credits

Prerequisites
- Chem 105: General Chemistry I (Minimum grade: C-)

Instruction Type(s)
- Lecture: Lecture for Engr 545

Subject Areas
- Chemical Engineering

Related Areas
- Chemical and Biomolecular Engineering
